

UX/UI Information

Logo- Simple, yet classy. The white cursive lettering suits the tone with the navy background. The H and B combined into one emblem looks very unique. Would look very good with effects added to it.

Grey Outline- You will notice throughout my website that I have added lots of grey outlines. I feel that they go well with the colour scheme.

Header/Footer- When you hover over the navigation options and the social media emblems, you will notice an opacity effect.

Icons- On the home page, you will notice creative icons resourced from www.flaticon.com which you can click on to navigate to my other web pages.

Portfolio- I implemented a ton of CSS on this page. I arranged my pieces into a grid and created a hover code where when you put your mouse on top of a piece, you can get the information on that specific piece, so it doesn't crowd up the page. Looks nice and clean. The videos I included also auto play on mute with no controls, so nothing gets in the way of seeing the video.

Alignment/Typography- All 5 pages have consistent alignment, colour, heading fonts, and body fonts.
